The smartest distance between two points.

For over thirty-five years, Intralox has provided innovative conveying solutions for a multitude of industries. In manufacturing and distribution operations, companies are frequently faced with changing demands from their customers. The need for increasing package variety, smaller (individual) product sizes, and customized pallets is ever-increasing.

In response to these issues, Intralox developed an exceptionally reliable and flexible conveyance technology that is safe, simple, and cost-effective.

Activated Roller Belt™ Technology

Intralox's Activated Roller Belt™ (ARB) technology has been heralded as one of the “**single, best innovations**” in package handling.* With no complex mechanical or electrical controls, ARB technology provides a unique conveyance platform for successfully handling a wide range of products where other conveyance technologies falter.

How Our Technology Does the Work for You

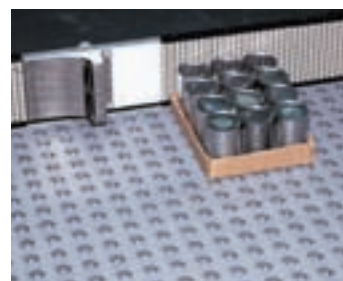

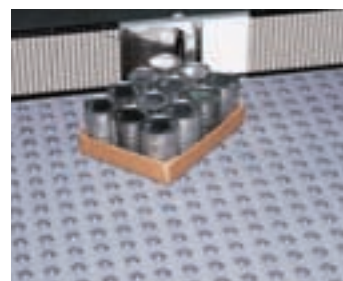

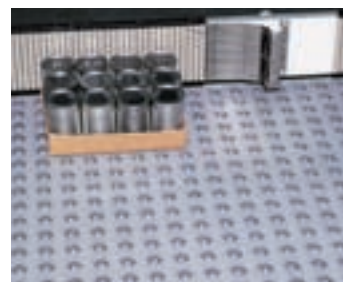

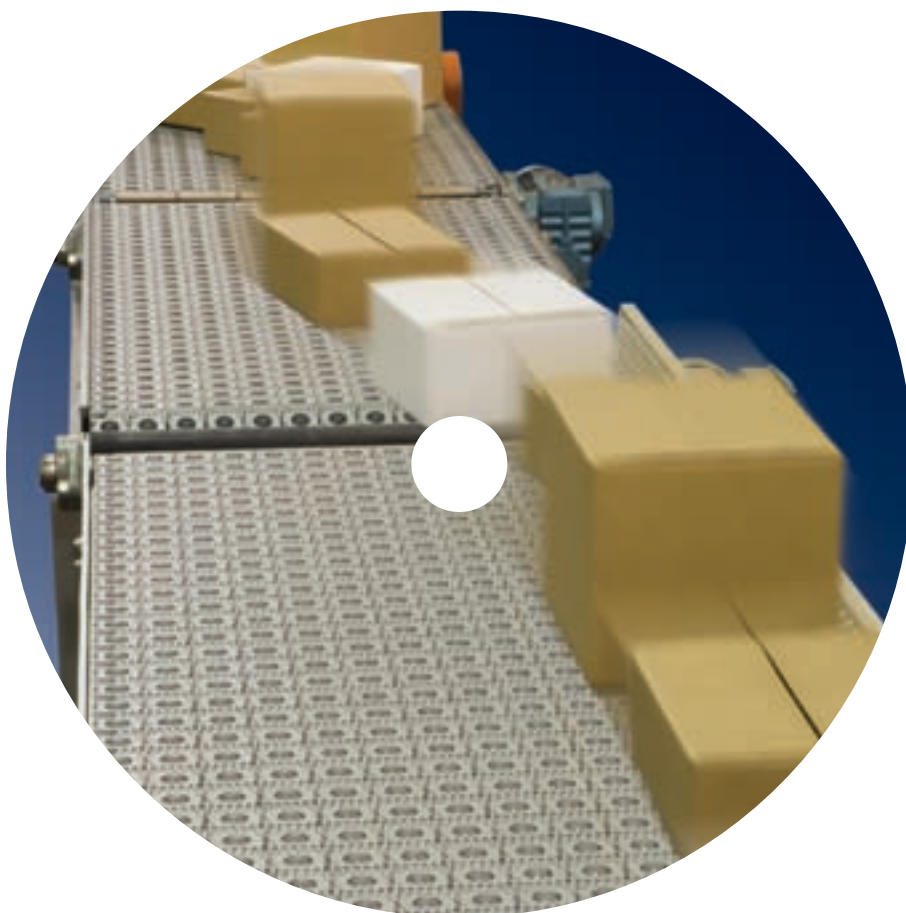

Whether sorting, merging, descrambling, or orienting packages, ARB technology has proven to increase throughput, improve accuracy, and reduce labor costs, making it the most cost-effective conveyance solution available to meet your demands and improve your bottom line.

Please view our Intralox Package Handling Solutions CD to see videos and animations of Intralox technology in action.

"I was amazed that such a simple solution could eliminate labor and waste. The Intralox ARB technology paid for itself in less than six months."

Mike Marsh, Vice President of Pattco, Inc.

“It’s been a long time since putting something that simple into the plant that has created so many other potential improvement opportunities within the factory.”

Lyndon Scrooby , Continuous Improvement Manager of Sara Lee Bakery

Team Up with Experts

Team up with Intralox package handling experts to explore how our innovative technology can improve your bottom line. We take each customer’s conveyance applications seriously. We test your products on our technology at our in-house test facilities to ensure that each Intralox solution delivers maximum results. We also use advanced simulation software to create the most efficient design and footprint. Intralox is so confident that its technology will perform as promised in your applications that we offer strong written guarantees.

We equip a broad range of package handling applications to reduce labor needs and improve efficiency in areas you never thought possible. ARB—it’s the smartest distance between two points.
